# Drivers for better ice information

The Baltic Sea has heavy marine transportation  
2000 large vessels  
are sailing any given  
time in the Baltic Sea

>800 million tons of  
goods are transported  
every year

Marine transportation growing 30-40% in 10 years

# Why services: Baltic Sea maritime growth

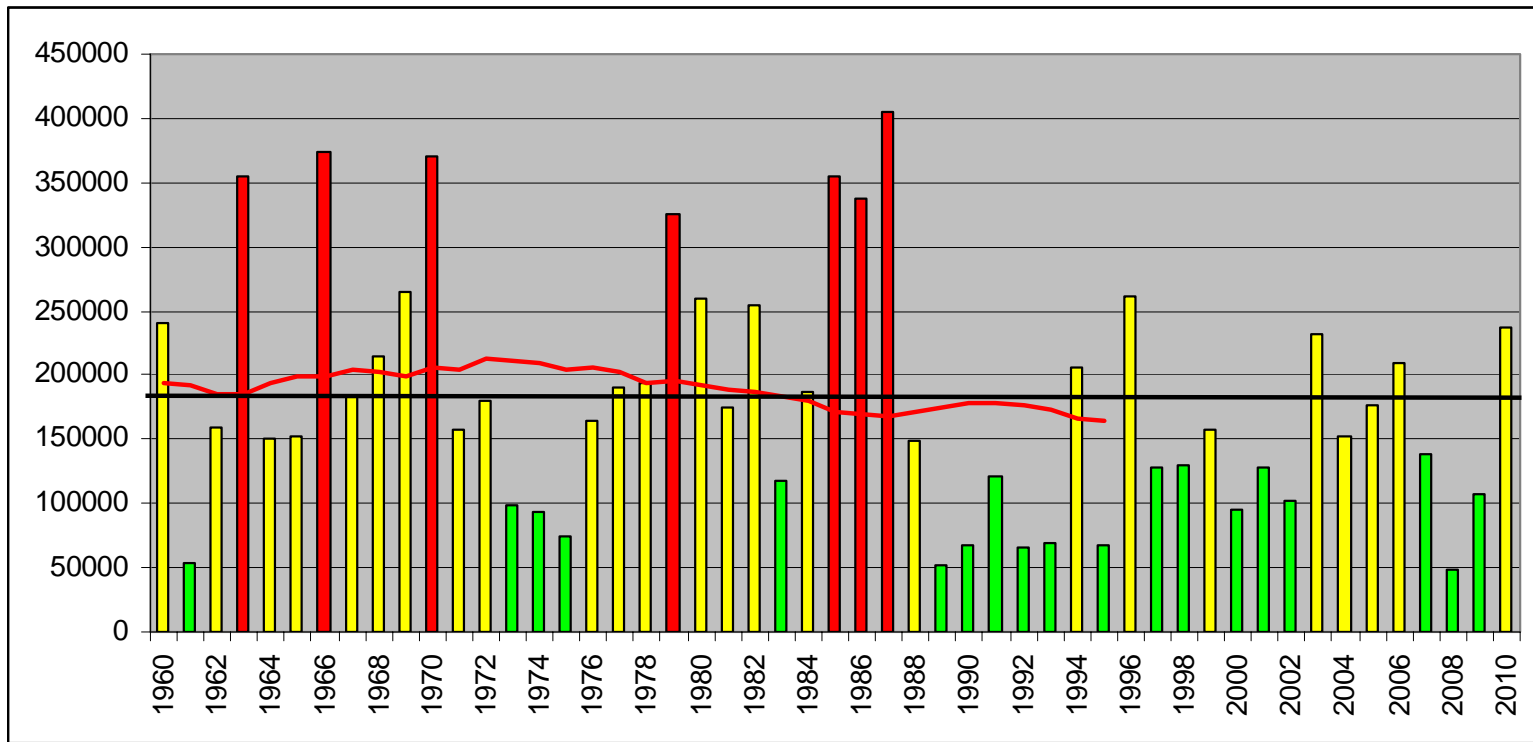

## Future scenarios

- **Total maritime transport at Baltic Sea in 2003 was 731 Mt, in 2020 expected 1,202 Mt? (During winter months growth from 292 Mt to 481 Mt)**
- **Transport of German ports will grow from 294 Mt to 759 Mt between 2004 and 2025?**
- **8 B containers in Baltic Sea ports in 2010?**
- **Growth of 450% in Russian container traffic by 2015?**

# Baltic Sea max ice extent 1960-2010

Red= severe season

Yellow= average season

Green= mild season

Min. 49,000 sq. km

AVG, 180,000 sq. km

Max. 405,000 sq. km

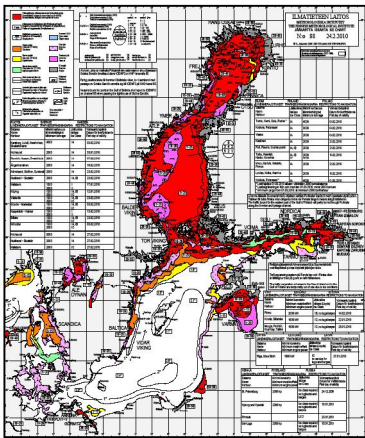

Red line= 30y  
running average

1990s 130,000 sq. km

2000s 150,000 sq. km

# Ice service: services and products

## Finnish Ice Service

- Started operationally in February 1915
- Hosted by
  - Finnish Scientific Society 1915-1918
  - Finnish Institute of Marine Research 1918-2008
  - Finnish Meteorological Institute 2009->
- Provides services to the Baltic Sea
- Main R&D ongoing projects
  - MyOcean (EU) => marine core services
  - Polar View (ESA) => ice model, ice thickness maps
  - KaraX (Tekes) => ice thickness maps to Arctic

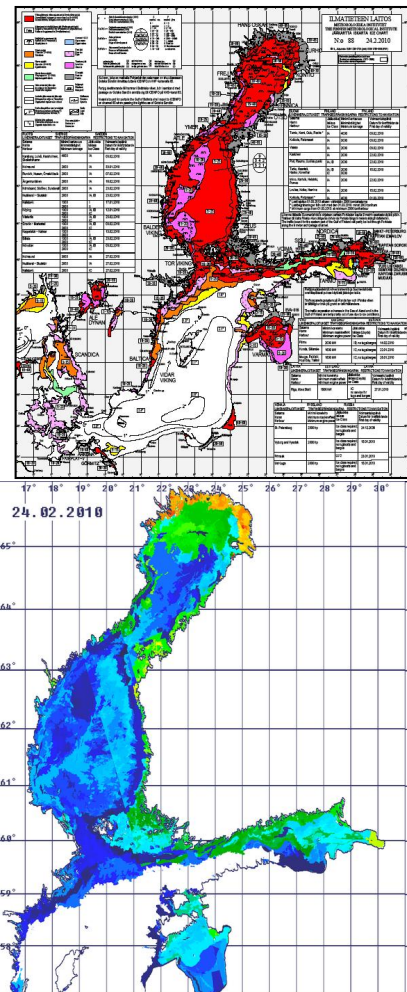

# Products & services

## Daily

- Ice charts over the Baltic Sea, Kattegat & Skagerrak
- Ice reports (plain text & coded) in Finnish, Swedish and English
- Numerical ice forecasts (+45h)
- SAR based products
- Satellite data service to Finnish and Swedish icebreakers
- Services to Baltic Icebreaking Management
- Services to Finnish icebreaking

1-3 times a week

- SST
- Long term forecasts

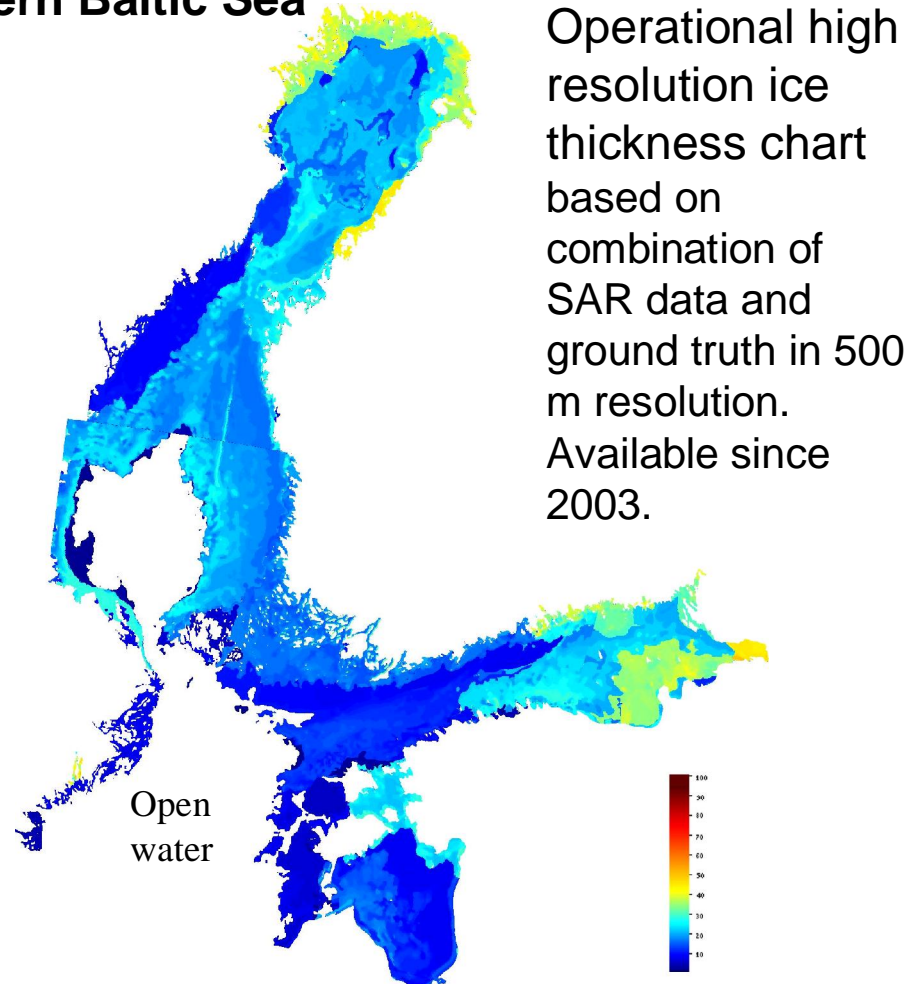

## RADARSAT ScanSAR Wide image combination and high-resolution ice thickness classification chart over the northern Baltic Sea

Original images: 6-7 January 2003

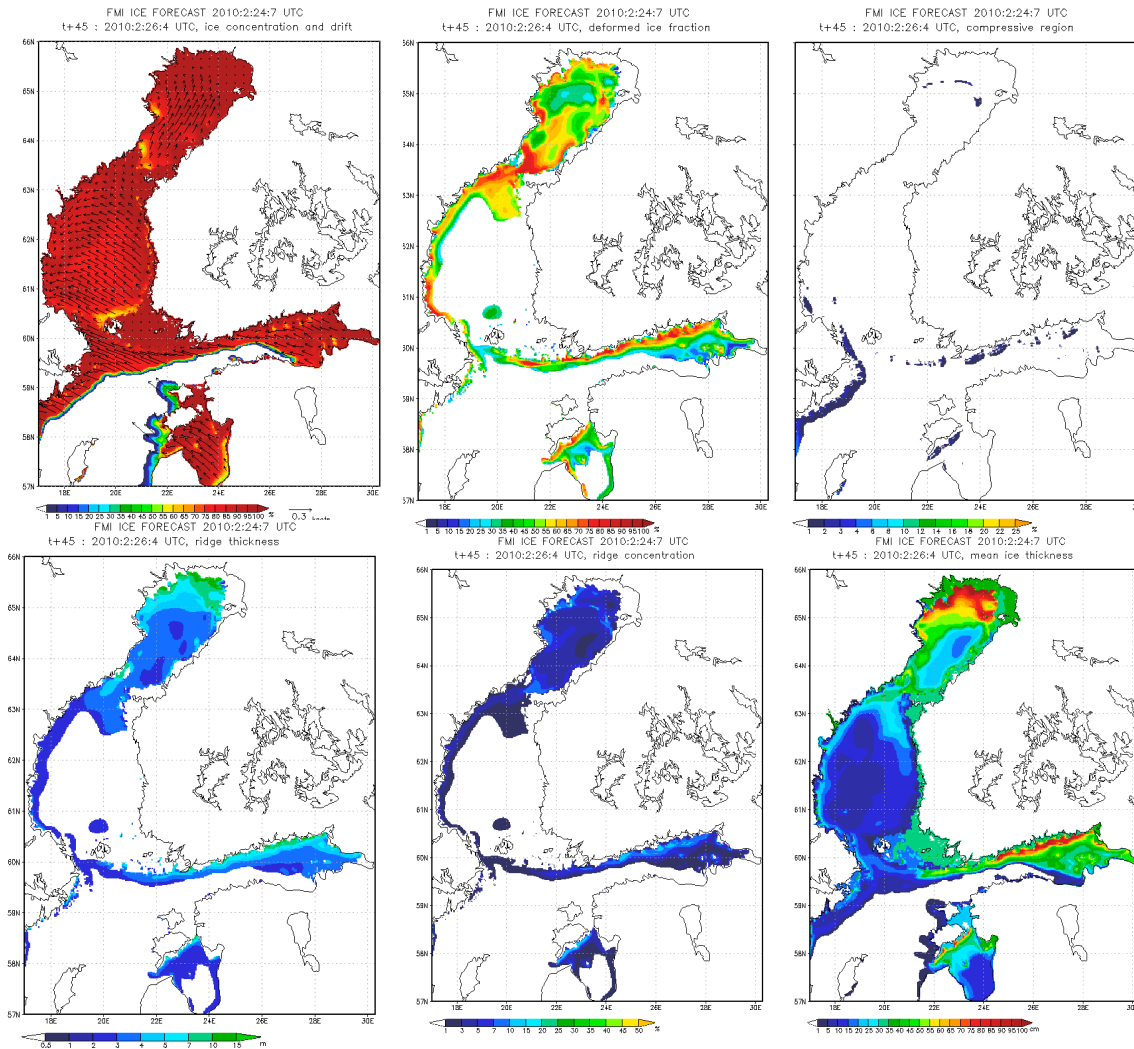

From original data into user-friendly products

# FMI's operational ice model

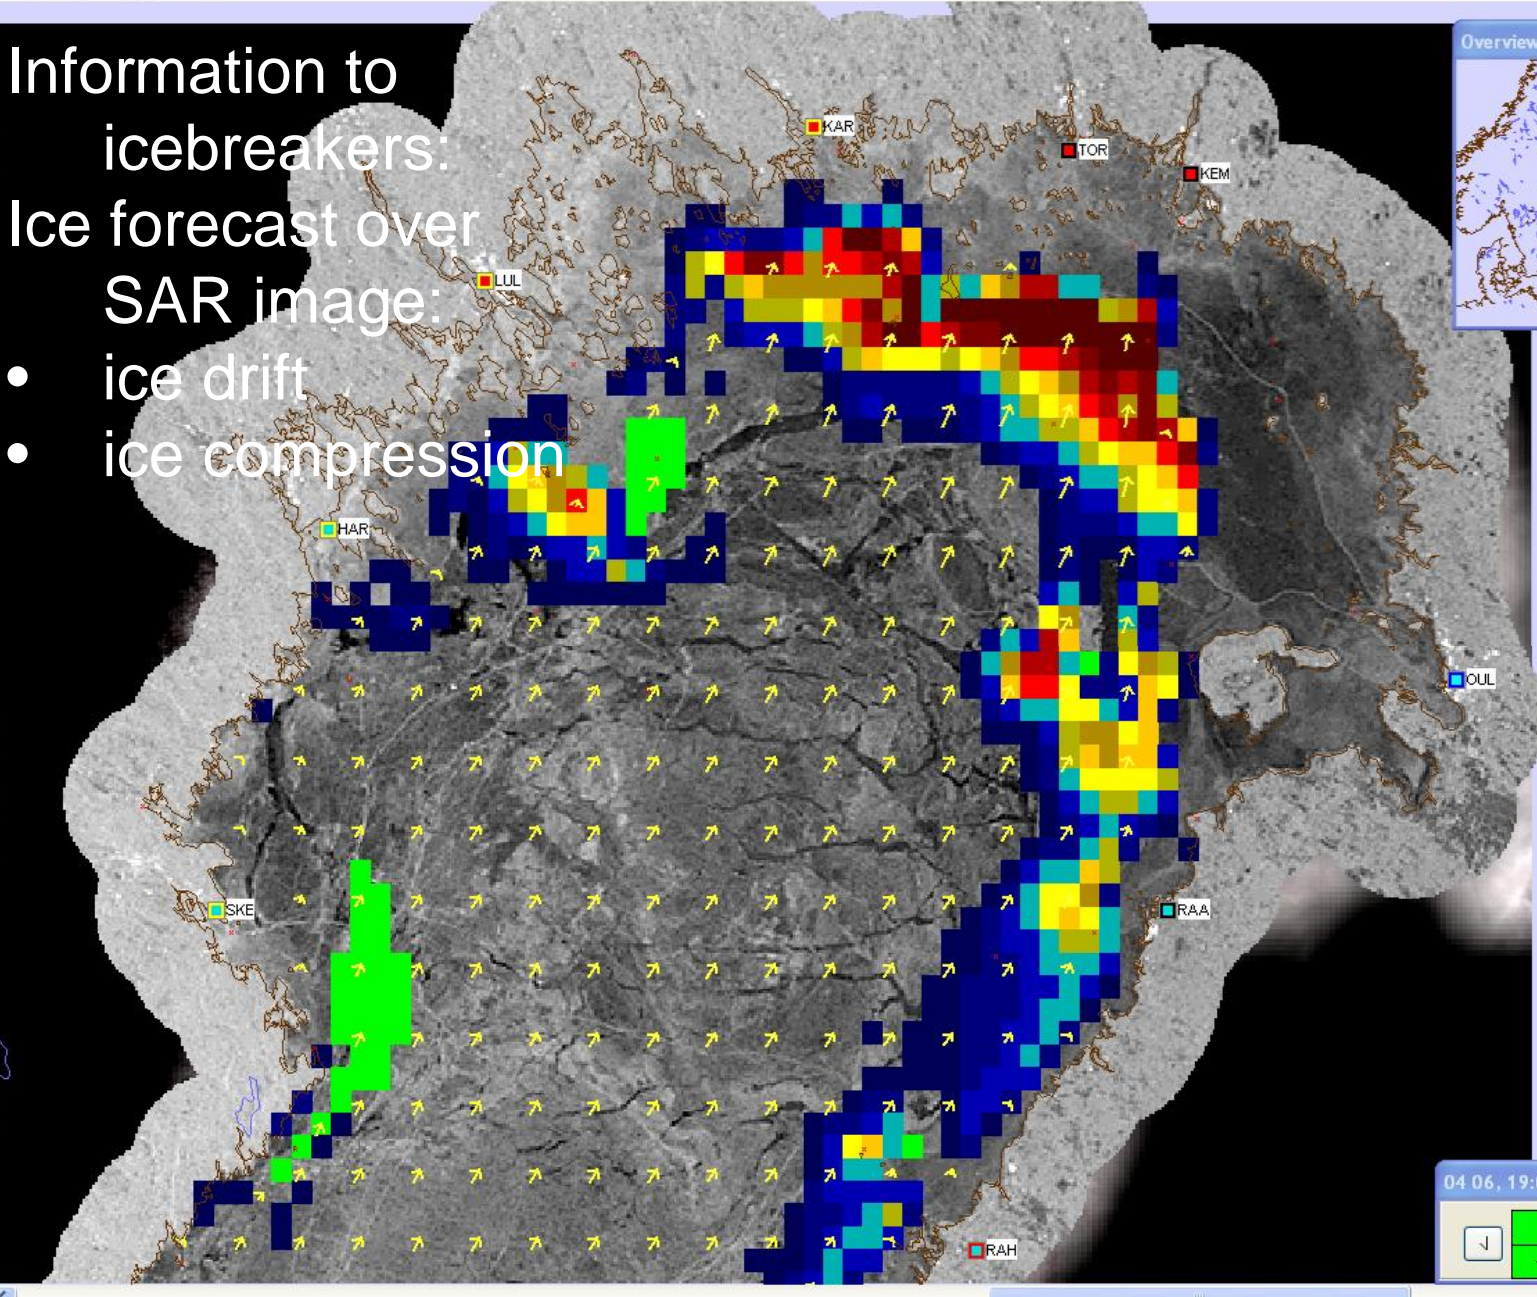

## FMI's ice forecasts

- Covering the Baltic Sea
- +45 h in 3 h steps
- resolution 1 nautical mile
- 6 parameters
- published once a day

Information to  
icebreakers:  
Ice forecast over  
SAR image:

- ice drift
- ice compression

MARGARIN

# Lessons

## Challenges

- **Information was available**
  - Warnings from Finland & Sweden
  - Ice forecasts (in net & icebreakers)
- **Warnings were not understood / were ignored?**
- **With low connection speed communication restrictions detailed information is restricted to users at sea**

## Solutions

- **Training?**
- **Detailed information to the ships (for hot spots)?**

# Conclusions (1)

## Challenges:

- **Baltic Sea has a heavy, growing marine transportation**
- **Ice plays an important role also in the future**

## Availability:

- **Ice services are providing services and information**
- **New products and services have been developed**
- **Continuous R&D**

## Conclusions (2)

### Requirements:

- **Information must reach the users**
- **Development of low connection speed products**
- **Higher resolution (tailored) products are needed**
  - In "Ship's scale"
  - In situ & forecasts
- **Longer reached forecasts**
  - R&D needed
